CONVERSATION CONFIRMATION

PERSON CONTACTED: John Barnes, NYSDEC  
OFFICE: NYSDEC, Division of Hazardous Waste Remediation  
PHONE: (518) 457-3395  
DATE: September 21, 1995  
SUBJECT: Remedial Design Approval for Grumman-Bethpage

I asked John Barnes whether NYSDEC had approved the remedial design for Sites 1 and 2, which was submitted in May/June 1995. John B. said that this design was for the PCB remediation, for which construction has begun in September 1995. John B. said that the design for PCB remediation was acceptable to him, but he had not prepared anything in writing to show his approval of the design. This is because the NYSDEC Remediation program doesn't send approval letters on this type of document. However, John B. does have a database log where he accounts for all the milestones completed. He promised to try to send me a copy of this log when it becomes available in October. (He needs to check whether non-NYSDEC persons are allowed to have copies of it or whether it is for internal use only.)

In reference to the volatiles remediation, the design has not yet been completed.
